~~Test~~

Biology Practice Test on
Cellular Respiration.

The living cells obtain energy by the oxidation of complex organic compounds. The organic compounds, chiefly

Access Free Ap Bio Cellular

carbohydrates, are oxidized completely into carbon dioxide and water with the release of energy. This process is called cellular respiration. When you've finished answering as many of the questions as you can, scroll down to the bottom of the page and check your answers by clicking 'get score'.

Adenosine triphosphate (ATP) is the main product of cellular respiration, and the molecular energy of the cell. Aerobic metabolism results in a much higher yield of these energy carrying

Access Free Ap Bio Cellular

molecules due to the fact that it can use oxygen as a final electron acceptor in the electron transport chain.
