Collision theory. all reactions require activation energy, so reactions will only occur when atoms, and compounds collide with enough energy. How does increased concentration increase the rate of reaction? More molecules are present for collisions to occur. With higher concentration, more reactants, on average, will have enough energy to proceed forward.

What is the collision theory? It is the idea that particles have to collide in order to react and they have to collide hard enough (with enough energy to break the bonds - activation energy). How does a higher temperature increase the rate of reaction? When the temperature is increased the particles have more energy and move quicker.
