Chromosome Study . In this activity, you  
will create a karyotype from a page of  
mixed chromosomes. Karyotypes are  
created by matching homologous pairs and  
numbering them from largest to smallest.  
Abnormalities, such as extra or deleted  
chromosomes can then be diagnosed.

Chromosome Study Lab 26 Answers -  
teamfighttowalk.com

Chromosome analysis is usually done on a blood sample. In the laboratory, the cells from the sample are placed in several special chemicals. These chemicals help the cells grow in number by dividing. That allows the chromosomes to be seen under a microscope.

Chromosome Analysis Test - Nationwide  
Children's Hospital

A chromosomal microarray study (CMACB / Chromosomal Microarray, Congenital, Blood) is recommended as the first-tier test (rather than a congenital chromosome study) to detect clinically relevant gains or losses of chromosomal material for individuals with multiple anomalies not specific to well-delineated genetic syndromes, individuals with apparently nonsyndromic developmental

Mounting of polytene chromosome from salivary gland of chironomous larva

Theory. Polytene or Giant chromosomes are over-sized chromosomes commonly found in the salivary glands of larval stages of *Drosophila* and *Chironomus* dipteran flies. In those, glandular cells undergo endomitosis without cell division.
