The fact that applied researchers have very little guidance as to how to choose functional forms and/or underlying distributions and that economic theory rarely gives any such guidance make nonparametric techniques an almost 'unavoidable' tool.

nonparametric. Intuitively, one would expect that, if n is large, then \hat{p} should be "close" to p . Indeed, one can easily show that the mean squared error (MSE) of \hat{p} is given by (see Exercise 1.3) $\text{MSE}(\hat{p}) = E((\hat{p} - p)^2) = \frac{p(1-p)}{n}$, so $\text{MSE}(\hat{p}) \rightarrow 0$ as $n \rightarrow \infty$, which is termed as \hat{p} converges to p in
