The design configurations of SBR and continuous-flow systems are otherwise very similar. Plants operating under continuous flow should operate this way as a standard mode of operation. Ideally, a true batch-reaction SBR should operate under continuous flow only under emergency situations.

CONSIDERATIONS

An SBR system may be designed as consisting of a single or multiple reactor tanks operating in parallel. Each operating cycle of a SBR reactor comprises five distinctive phases, referred to as: FILL, REACT, SETTLE, DRAW and IDLE phases. Figure 1 illustrates a SBR reactor operation for one cycle (batch) of wastewater treatment.
