Although water is a renewable resource, there is only a certain amount of water available at any time, and in many places in the world it is limited. Water resources are renewed as part of the water cycle. This activity asks students to make three labeled diagrams to help explain various aspects of the water cycle. Diagram 1: Water cycle. Step 1.

Water cycle and catchment connection - Cool Australia
What happens in the natural water cycle? The natural water cycle uses physical processes to move water from the surface of the earth to the atmosphere and back again. Evaporation is when the sun shines on water and heats it, turning it into gas called water vapour which rises into the air.; Transpiration is when the sun warms people, plants and animals and they release water vapour into the air.

Natural water cycle
The water cycle is made up of five stages; evaporation, condensation, precipitation, run off and infiltration. Each of these stages are vital to the way we get our water and to the continuation of the water cycle.The water cycle starts when water is taken from the oceans and lakes when it is heated up by the sun, this process is known as evaporation.

The Water Cycle - Year 7 geography
Water cycle, cycle that involves the continuous circulation of water in the Earth-atmosphere system. Of the many processes involved in the water cycle, the most important are evaporation, transpiration, condensation, precipitation, and runoff. The total amount of water remains essentially constant.
